Actualizing constant internet connection of high flow rate

- LAN on the level of the Municipal Administration building Indija
- MAN (networking institutions on the level of the city)
- MAN (networking institutions on the level of settlements within the Municipality)

Goals

- Implementing complete internet connection coverage of the whole territory of the municipality of Indjija

Basic assumptions and goals

LOGISTICS

- Setting up a central data base
 - constant web availability
 - Implementation of e-government solutions
 - Installation of service **System 48**
 - modern communication towards citizens (sms, mms, e-mail)

Where are we today

Public Enterprises

Central data base

- Setting up a central data base
- Networking of institutions within the city has already been solved:
 - Networking of all public enterprises
 - Networking of all elementary and high schools
 - Networking of the Health Center

Network

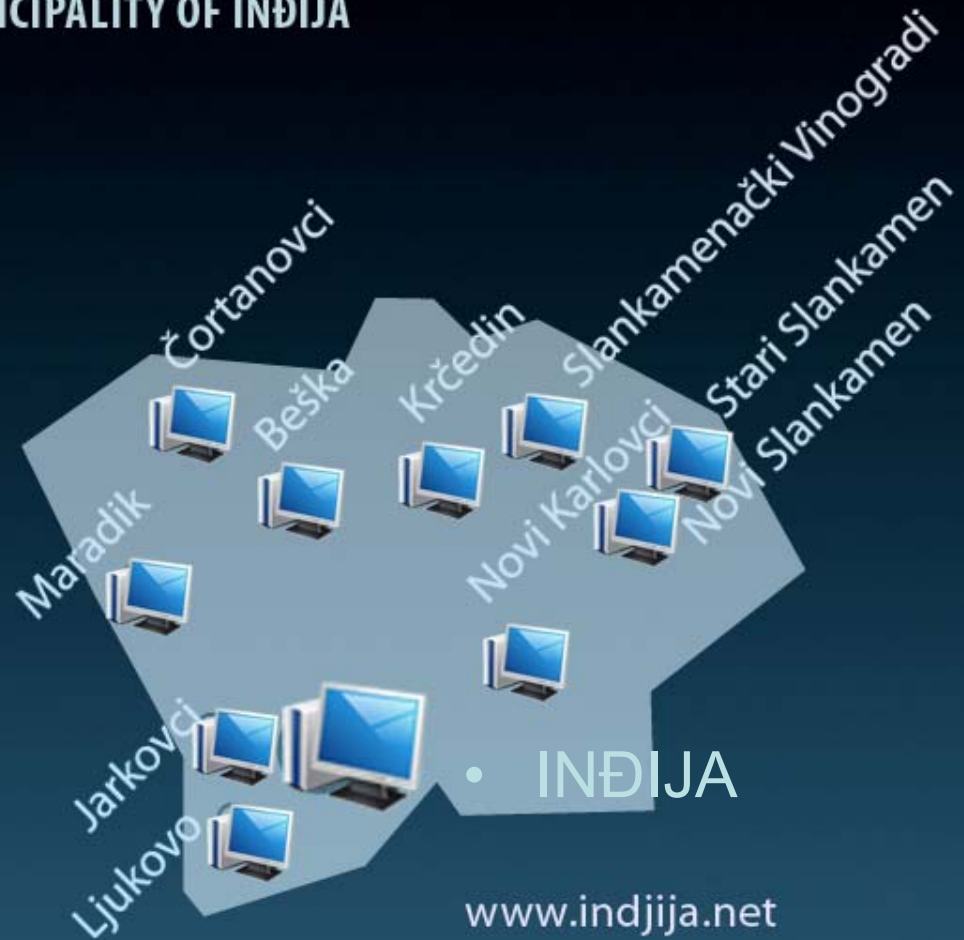

- Setting up a central data base
- Networking of institutions within the city

e - government

MUNICIPALITY OF INĐIJA

- All 11 settlements of the Municipality of Indjija are networked in a unique infrastructure, consisting of the following settlement institutions:

- Local offices (that have the right to access certain parts of the central data base)
- Elementary schools (to which the Municipality is giving a free ISP service for the better education of the students)

e - government

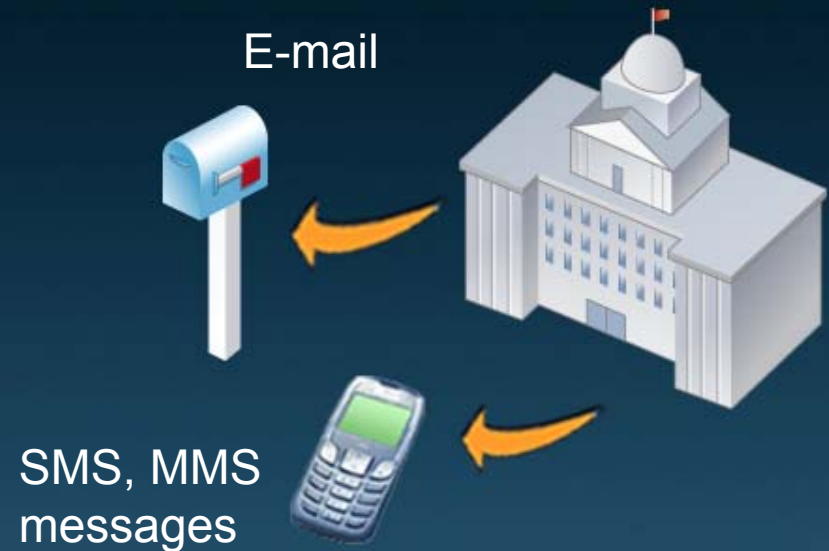

MUNICIPALITY OF INĐIJA

- All administrative jobs that are being done in the Citizen Assistance Center are now available online
- Inđija is the only municipality in Serbia that provides these services through a web site www.indjija.net :
 - Issuing basic personal documents
 - Issuing all types of licenses
 - Online monitoring of the status of citizens request

e - government

Information about the status of the citizen requests:

- besides through the website, they can obtain it also through :

SYSTEM 48

- a unique system in whole Europe
- response to all citizen problems in 48 hours (together with the status and a deadline for its completion)
- joins all communal enterprises
- controls municipal resources: enabling a short term and long term planning
- easier control and coordination of the work with public enterprises
- system is completely citizen orientated

Perspectives of implementing of new generation of internet connection and local networking...

- Implementing 802.16(WiMAX) standard that will cover the whole territory of the city and facilitate full mobility
- this creates the possibility of providing free internet service for all citizens
- Cutting down the digital divide and increasing e-literacy

Municipality of Indjija

Mission: To develop...

- Further development of e-government solution and applications (Ministries, Police, Judicial system for courts, prosecutors and commercial courts)
- provision of these solution to other government institutions in Vojvodina, Serbia and in the region.

Municipality of Indjija

Mission: Objective to achieve...

- To make well structured and integrated e-government system solutions that will provide more opportunities for investments, better administration services and improve quality of life of citizens.
